

FEATURES AT A GLANCE

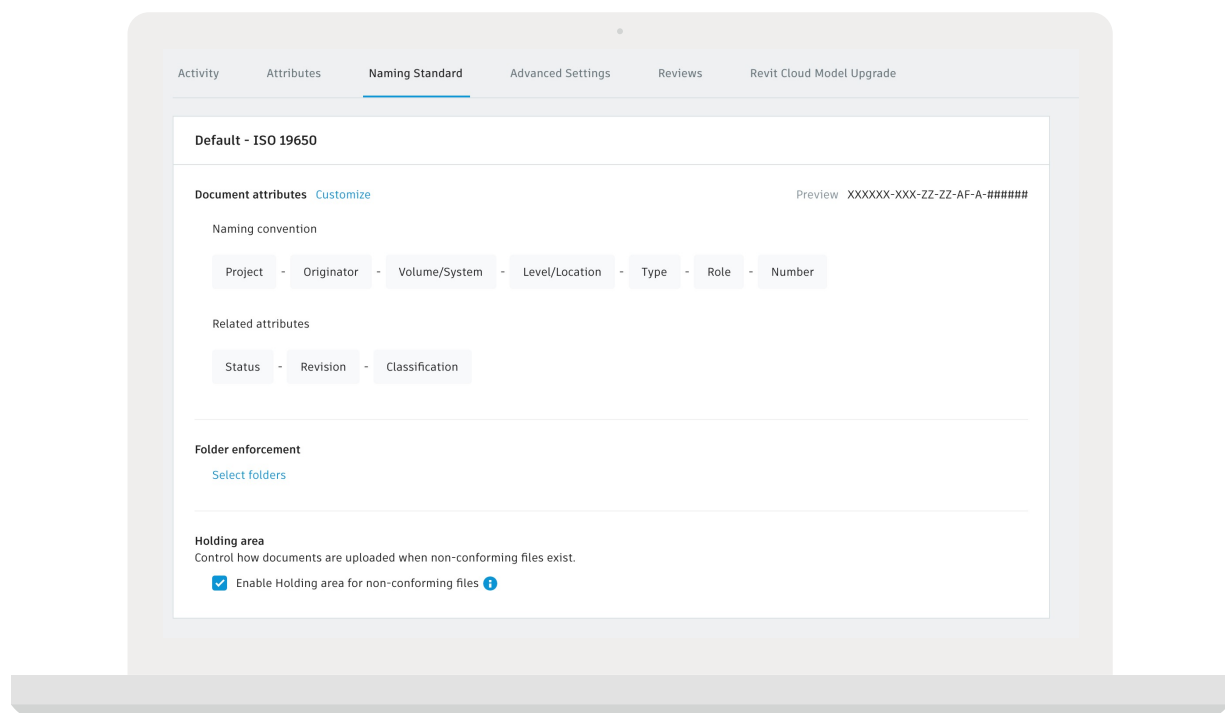

# ISO 19650 Workflows

Currently on Web.

## Configure and standardize ISO 19650 project naming conventions on a connected document management solution.

Standards like ISO 19650 define the collaborative processes for managing information over the project lifecycle. Without a standardized document control process, teams waste countless hours looking for the most up to date information. Ensuring consistent document control is key to meeting project requirements and avoiding rework. With workflows that support the ISO 19650 standard in BIM 360 Docs, teams can efficiently configure, organize, and distribute documents across the project lifecycle.

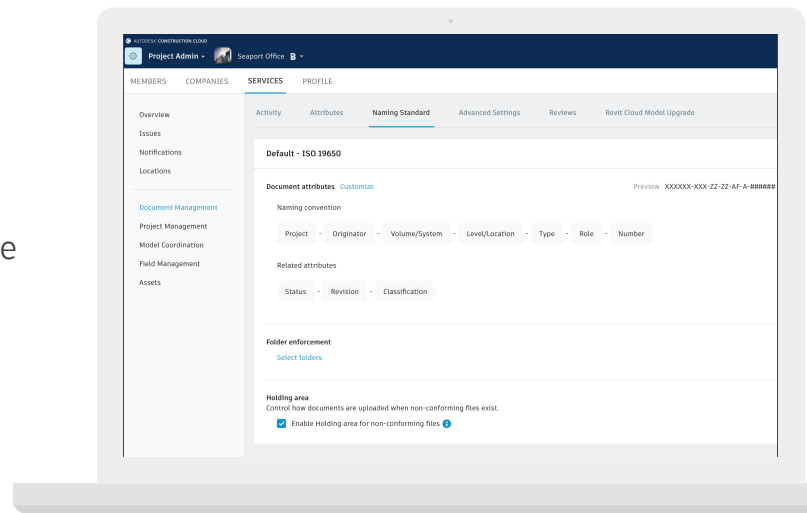

# Meet project requirements with ISO 19650 workflows

Save time and rework with customizable project settings, and easy to use and automated workflows.

1

## Preview and enforce the naming standard.

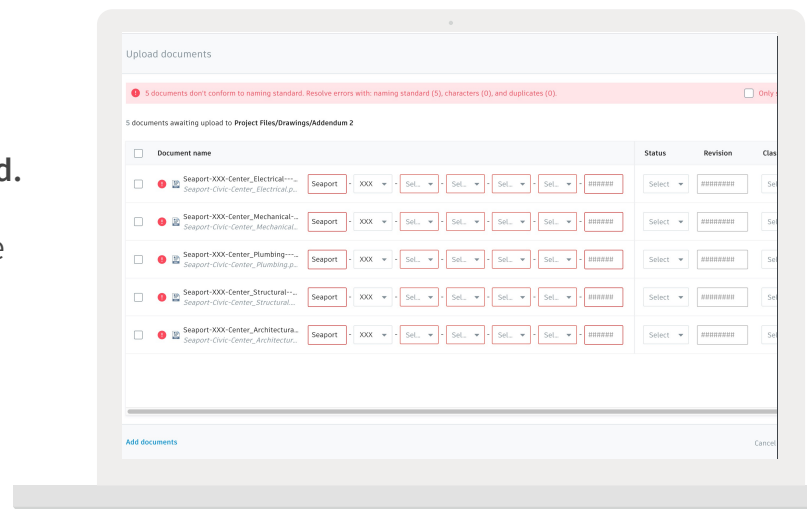

- Create, manage and enforce a naming standard across project files to ensure standardization. Easily customize and configure standard and related attribute fields.

2

## Validate the naming standard.

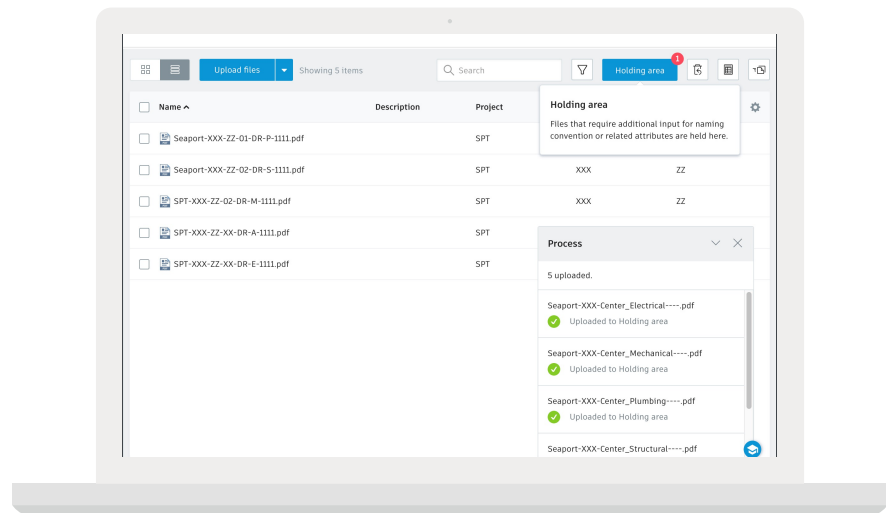

- A validator ensures files uploaded conform with the project naming standard. Quickly update the necessary fields with drop down menu selections and bulk editing.

3

### Streamline workflows with a holding area.

- Ensure seamless file upload processes with a holding area for files that do not conform to the project naming standard. Navigate to the holding area to continue the renaming of documents, validate, and complete the upload process.

4

### Increase efficiency with integrations.

- Reduce guesswork and save time with connected project naming standards enforcement. Streamline workflows with native integrations across Autodesk tools such as Revit, AutoCAD, and Desktop Connector.
